Self-check Method of Bluetooth Problem

Please check the setting by yourself as follows when the App cannot find out the Bluetooth or connect to it:

1. Disconnect the power and try to connect the Bluetooth after reconnecting the power.

2. Open the Bluetooth list of the Bluetooth connection interface on the App, find out the Bluetooth device and click it to connect manually.

3. Allow the app to request the location permission, which is required by the Bluetooth function of the phone. We will not record any information of your location.

4. Since some brands of phones only connect to Bluetooth with the GPS turning on, please turn on the phone's GPS function or location information switch.

5. Shut down the app's processes and restart the app.
